Semester

Spring 2022

Short Description

The seminar will begin with a discussion of the concept of "Stateness." We will then move on to the era of reform in the Middle East of the 19th century when Western ideas of nationalism and the nation state penetrated the local discourse. It will also discuss the creation of the new states in the region in the wake of World War I and the decisive influence of the Western powers, Britain and France, in the delineation of the borders of these new states. The course will then discuss a variety of cases of states in which different types of sub-national and supra-national identities have affected the capacity of these states to evolve into stable entities over the long term. The course will conclude with a discussion of the "Arab Spring" as a consequence of the profound socio-economic crisis that has overtaken many Arab states and the proliferation of non-state actors like ISIS who have risen to challenge the existing state order.
